Become an Agent

To capture a tremendous Baby Diaper market as well as need for Adult hygienic products that solve problems of incontinence, you can start a lucrative and prosperous business that gives you the opportunity to:

- Own your own home based business
- Earn an extra income
- Be independent and create wealth in your own time at your own rate
- Do direct product selling that is within everyone's reach.

The diaper part-time or full time home business is not a get-rich-quick scheme, but low-profit-high-turnover principles apply. Success takes time, effort and perseverance, and is guaranteed only by your own effort and perseverance.

You will reap financial reward through direct product selling by purchasing at Agent prices and selling them at suggested retail prices. This gives you a potential 15 – 25% retail profit on products with minimal operating costs.

Be successful, become a AH Distributors agent and create wealth!

1. Why the Diaper Business ?

Baby Diapers

All babies use diapers (whether linen or disposable) for the first 2 ½ – 3 years.

Modern trends and research have indicated that the cost of linen diapers is more or less the same as disposable diapers. Although it seems that one has only an initial outlay on the purchase of linen diapers, the continuous costs absorbed by the electricity bill, grocery costs (detergents etc) and maintenance wages (time consumed to take care of the product etc), are not always taken into account.

Disposable diapers are more hygienic (less skin irritation) and much more convenient to use and could even be more economical when the correct product is chosen.

Adult Diapers & Pads

Adult Incontinence's occurrence is estimated to be 5% of the population, targeting 28% of all elderly people.

In Continence care, the medical term "Incontinence" is defined as the loss of the ability to exercise voluntary control over the excretion of urine or faeces and to determine the time when excretion shall occur. The involuntary emptying of the bladder, referred to as urinary incontinence, is by far the more prevalent condition.

Modern disposable incontinence briefs or pads enable the patient to lead an almost normal life despite his incontinence problem. Absorbent incontinence products can be worn discreetly inside the underwear and absorb the urine quickly and reliable, whilst at the same time protecting sensitive skin and preventing unpleasant odours. Incontinence products are also essential in the care of bedridden patients where they

improve the basic hygiene conditions and help to prevent the occurrence of complications such as skin lesions.

Taking into account the number of Old Aged Homes, Retirement villages and Caring Institutions, this market is huge. It requires specialized knowledge and attention with regards to :

- advice on the correct product usage and
- reaching the patient who is not very mobile.
